Disclosure; Fig 1; 8pp; Japanese.

Disclosure; Fig 1; 8pp; Japanese.

The sequence shows the exon 2 alpha-1-domain of the human leukocyte antigenes by 52 gene. The complete gene may be introduced into non-antigenes by pref. rat or mouse, or their ancestors at the primary developmental biological step via transplantation into the zygote or embryo to generate transgenic non-human mammals conty. HLA-Bw 52 are useful for the analysis of expression of the gene, its structure, and prodn. of mouse models of human disease.

Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype.

The immunised with HLA antigen of different allotype.

Disclosure; Fig 1 A-G; 20pp; English.

Che human HLA-B51 gene was injected into fertilised mouse eggs and then these introduced into the uterus of a pseudo pregnant mouse.

The young were tested to ensure incorporation of the gene into the chromosome, and one of them mated 3 times with a normal male to produce 16 young, seven of which carried the HLA-B51 gene.

The spleen lymphocytes were inmunised with HLA antigen.

The spleen lymphocytes were selected.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      03-JAN-1991 (first entry)
03-JAN-1991 (first entry)
HLA-BW52 gene for production of monoclonal antibodies.
Alloptype specific monoclonal anti-HLA antibodies; hybridomas; transgenic animals; HLA-BW52 gene; ss.

Probes comprising part of the sequence can be used to identify class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-BW33 antigen. See also J03112485 and J03112486.

 DNA coding for human histocompatibility antigen HLA-B 27 - useful for diagnosis and antigen and antibody prodn.

Claim 1, p6; 13pp; German.

THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, e.g., for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.

Detecting pre-disposition to seronegative spondylarthropathies - Trom the absence of a C residue at a specific position in the from the absence of a C residue at a specific position in the 3'-flanking region of the HLA B72 allele Claim 1; Page 52-56; 68pp; English.

Genetic predisposition to seronegative spondyloarthropathies (SNSA) is detected by determining the absence of a cytosine nucleotide in the 3' flanking region (see also TG1647-48) of an HLA-B3 gene at a position corresponding to nucleotide 4495 of the HLA-B37 consensus sequence given in TG1639. Probes and primers (see also TG1640-46) chased on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA from B27+ normal individuals who are susceptible (but as yet unaffected) to such diseases.

                                                                                                                                                                                                                                                                                                                                                        X51701-55 encode human secreted proteins. The polynucleotides and their corresponding secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene treating or ameliorating medical conditions or a per protein or gene conditions and also be diagnosed by determining the presence of mutations in the new polynucleotides. Specific uses are presence of mutations in the new polynucleotides, Specific uses are described for each polynucleotide, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, inflammatory disorders, skin disorders, twours, atheroscierosis, restenosis, autoimmune disorders, altheimer's disease, peripheral neuropathies, trauma, spinal cord injuries, allergy, hematopoietic disorders, asthma, immunodeficiency diseases, AIDS and transplant rejection. The polypeptides are also useful for identifying their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human genes
(Claim 2; Page 126-129; 184pp; English.
This sequence represents a human gene of the invention, that is induced
to express by both HCWV and interferon (IFN), designated HCMV-inducible
genes (cig or cigs). The invention also relates to genes that are
repressed in the presence of HCMV infection, designated HCMV-repressible
genes (crg or cigs). The products can be used to obtain agents which can
be used for anti-viral therapy, particularly anti-HCMV therapy. They can
also be used for the development of drugs that would allow for higher
dosage IFN treatments without the concomitant toxicity normally
associated with administering high levels of IFN. The products can also
be used for detection, diagnosis and drug screening.
                                                               New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. neurological disorders, tumours, immune disorders, inflammation or haematological disorders Claim 1: Page 170: 215pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human HCMY inducible gene, SEQ ID NO 17.

Claim 1; Pages 34.36; 49pp; English.

This cDNA sequence encodes a novel galactanase isolated from a factor of sequence encodes a novel galactanase isolated from a majoritied on SC-agar plates using the AZCL xylan assay. cDNA inserts were amplified directly from yeast colonies. In order to express the galactanase in Aspergillus, the DNA was digested with appropriate restriction enzymes, size fractionated on a gel and a fragment corresponding to the galactanase gene purified. The gene was subsequently ligated into pHA414 and digested with appropriate restriction enzymes to give pA2655. After amplification of the DNA in E. coli the plasmid was transformed into Aspergillus oryzae and transformant activity was analysed. The galactanase can be used to reduce the viscosity of plant cell wall derived material, thus having implications in wine production, the preparation of fruit or vegetable juice or for the modification of animal feed allowing a significant definition of in the in vivo breakdown of plant cell wall material e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 99-081273/07.

New isolated Treponema pallidum nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of T. pallidum infections, particularly syphilis claim 1; Page 799-800; 1150pp; English.
X20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-WAY-1999 (first entry)
Polynucleotide sequence from the genome of Treponema pallidum.

NOV nucleic acid encoding glucose oxidase active at acidic pH, from range useful as bread improver, antimicrobial additive for cladosportdium - and related vectors and host cells, producing relationship as a cladosportium oxysporum glucose oxidase. Host cells containing a construct comprising the glucose oxidase encoding nucleic acid sequence with regulatory sequences are used to produce recombinant glucose oxidase. Preferred fragments of the nucleic acid are present in pGCX4A and pGCX6A, contained in E. coli deposited as NRRL B-21628 and B-21629. The host cells are particularly Fusarium. The recombinant glucose oxidase is useful as a dough additive to improve the gluten quality. It can be used as additive for toothpaste (particularly used with a thiocyanate and lactoperoxidase to generate antimicrobial oxythiocyanate and lactoperoxidase to generate antimicrobial oxythiocyanate and alactoperoxidase to generate antimicrobial oxythiocyanate and nucleic and agent. It is also useful as a hydrogen as bleach or as an antibacterial agent. It is also useful as a hydrogen are and the acid and agent. It is also useful as a hydrogen or each and antibacterial agent. It is also useful as a hydrogen and acid as a hydrogen are and an arthadretial and dishwashing detergents, particularly for each and an each acid are acid are products.
diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrella infections in animals, and for the production of biosynthetic products such as enzymes. Sequence 1145 Bp; 242 A; 267 C; 374 G; 257 T;

NOVEL immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                 Claim 10: Page 36: 41pp; English.

Claim 10: Page 36: 41pp; English.

The present sequence is an immunomodulatory peptide, which
comprises a class I HAA-B alpha-1 domain sequence. It can be used
in a pharmaceutical composition together with a subtherapeutic dose
of an immunosuppressant, to extend the period of acceptance of a
transplant from a major histocompatibility complex (MHC) unmatched
donor, i.e. to inhibit transplant rejection. It can also be used in
the treatment of autoimmune diseases.
Peptides using the D-form amino acids are more effective
immunomodulators than their diastereomers or enantiomers.
                                                                                                                                                                                      the
                                                                                                                                                                 7..10
/note= "at least one of the amino acids is
D-isomer

Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R82907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                         HIA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)).

Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HIA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HLA-B2702 CTL modulating peptide (B2702.84-75/84-75).

Novel immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                immunomodulatory peptide-type compound - useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         transplant rejection
Claim 10; Page 36; 41pp; English.
The present sequence is an immunomodulatory peptide, which
comprises a Class I HiA-B alpha-1 domain sequence. It can be used
in a pharmaceutical composition together with a subtherapeutic dose
of an immunosuppressant, to extend the period of acceptance of a
transplant from a major histocompatibility complex (MHC) unmatched
                                                                                                                                                                                                                                                        Comprises a Class I HLA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases. Peptides using the D-form maino acids are more effective immunomodulators than their disastereomers or enantiomers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  donor, i.e. to inhibit transplant rejection. It can also be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "at least one of the amino acids is the

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702.

These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HLA-B2702 CTL modulating peptide (B2702.84-75/75-84). Cytokoxic T lymphocyte: CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.

Claim 16; Page 35; 41pp; English.

This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R Ra76-771) (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunomodulating dimer peptide #1.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              89.8%; Score 44; DB 1; Length 20; 90.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
```

```
cc hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The cc absent or truncated at any peptide type bond within the brackets. The cc compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic CC T-lymphocytes (CTL) from undesirably attacking cells in a host or in cc vitro. They can also be used in combination with antigenic peptides or proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. Sequence 20 AA:
                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                      Immunomodulating dimer peptide #2.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;

The immunomodulating dimer peptide(s) - based on a class I HiA-B alpha-1 domain, used for preventing rejection of transplants or treating autofimmune diseases.

Treating autofimmune diseases.

Example 1: Page 19: 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating crivity. A peptide-type compound or variant is claimed which has a cituatly. A peptide-type compound or variant is claimed which has crimunomodulating activity, including the N-terminal acylated and/or c-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula A-B, where A, B = C c-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula A-B, and a represents amino acid sequence in the brackets may optimally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HiA-B alphal domain (positions of any peptide type bond within the brackets. They can also be used in combination with antigenic peptides or proteins of interest to acid transplants or for treating and lupus can be used for preventing rejection of transplants or for treating and lupus can be used of preventing rejection of transplants or for treating and lupus erythematosis. The products can also be considered to a thinking and lupus erythematosis. The products can also be considered to a thinking and lupus erythematosis. The products can also be considered to a thinking and lupus erythematosis. The products can also be considered to a thinking and lupus erythematosis. R83061-R83085, R83090-R83096 and R82907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibit cytolytic activity and differentiation of CTLs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 15; Page 36; 80pp; English.

R83061-R83085, R83096-R83096 and R92007-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HIA-B2702 CTL modulating peptide (B2702.84-75(T)/75-84(T)).
Yytokoxic T lymphocyte; CTL; major histocompatibility complex; MHC;

WNOvel immunomodulatory peptide-type compound - useful for inhibiting transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                          claim 10; Page 36; 41pp; English.
The present sequence is an immunomodulatory peptide, which comprises a Class I HLA-B alpha-1 domain sequence. It can be used in a pharmaceutical composition together with a subtherapeutic dose of an immunosuppressant, to extend the period of acceptance of a transplant from a major histocompatibility complex (MHC) unmatched donor, i.e. to inhibit transplant rejection. It can also be used in the treatment of autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Extension of acceptance period of transplants from MHC unmatched donor hosts - using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    W33791;

9-JON-1998 (first entry)

Peptide B2702.84-75T/75-84 tested for immunomodulating activity.

Immunomodulating dimer; immunosuppressant drug; CTL activation;

transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-MX-1996; US-653294.

CAO T., SHANNON M., HANDEL M.A., ETKIN L.D.;
"Mouse ret finger protein (rfp) proto-oncogene is expressed specific stages of mouse spermatogenesis.";
Dev. Genet. 19:309-320(1996).
-: FUNCTION: MAY FUNCTION IN MALE GERM CELL DEVELOPMENT.
-: SUBCELLULAR LOCATION: NUCLEAR (POTENTIAL).
-: SIMILARITY: CONTAINS A CSHC4-CLASS ZINC FINGER.
                                                                    Length 513;

                                             -:- SUBCELLULAR LOCATION: NUCLEAR:
-:- TISSUE SPECIFICITY: ABUNDANCE IS HIGHER IN CELLS REPRESENTING
EARLY STAGES OF THE B LAWHOID LINEAGE SUCH AS PRE-B AND B CELLS,
THAN IN CELLS REPRESENTING MATURE PLASMACKTES OR OTHER CELL
LINEAGES SUCH AS FIBROBLASTS.
-:- SIMILARITY: BELONGS TO THE SNF2/RAD54 HELICASE FAMILY.
-:- SIMILARITY: CONTAINS 2 'CHROMO' DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
SNF2/SW12-like helicase domain.";
Proc. Natl. Acad. Sci. U.S.A. 90:2414-2418(1993).
-!- FUNCTION: SEQUENCE-SELECTIVE DNA-BINDING PROTEIN. COULD PLAY AN IMPORTANT ROLE IN GENE RECULATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacteria; Firmicutes; Actinobacteria; Actinobacteridae;
